

Can you find the Shapes?

Just like with yesterdays activity, we will be doing a challenge to name and find as many shapes as we can. So, First grab a pencil and a piece of paper. List out as many shapes as you can think of. An easy way to do it is to start with shapes that are made out of only one line. Then shapes made of two lines. Then three lines and so on. Some shapes are made with the same number of lines but look different. Like a square and a rectangle. Keep that in mind as you make your list. Try to get at least 10 different shapes if you can!

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
- 8.
- 9.
- 10.

Now we will look around our environment to try and find these shapes in the real world! You can draw what you see or take pictures of the shapes you find. When you have found all the shapes, send your pictures and drawings to Mr. Joel- Joel.dion@hamiltonfl.com

Below are some examples.

1. Circle
2. Circle
3. Oval
4. Triangle
5. Square
6. Pentagon
7. Octagon

Bonus:

8. Look at the shape between the lines- that is called **NEGATIVE SPACE**. There is a triangle in the negative space created by the black lines.
